

How to pretest a trailer:

1. It is easiest to do this over the phone
2. Have the driver use a timer
3. Connect truck and trailer-wait 1 full minute.
4. If Trailer has not reported for 5 or more days in Omnitracs leave trailer hooked to truck power and wait 30 minutes before moving on to the next step.
5. Open door on trailer-wait 3 full minutes.
6. Close door on trailer-wait 1 full minute.
7. Disconnect truck and trailer-wait 5 full minutes.
 - a. If the trailer tracking unit has low power you may need to reconnect the tractor 7-way to get this message to come across.
8. Look at Omnitracs portal history-should see Power on, Omni Connect, door open, door close, power off & Omni Disconnect (see below).
